59

CLAIMS

- 1. A vaccine comprising a Sendai virus vector encoding a virus protein of an immunodeficiency virus.
- The vaccine of claim 1, wherein the virus protein 5 comprises Gag protein or a part of it.
 - 3. The vaccine of claim 1, wherein the Sendai virus vector is defective in V gene.
- The vaccine of claim 2, wherein the Sendai virus vector 10 is defective in V gene.
 - the 5. A method for vaccination, method comprising inoculating a vaccine comprising a Sendai virus vector encoding a virus protein of an immunodeficiency virus.
- method of claim 5, wherein The the vaccine is inoculated by intranasal administration. 15
 - method of claim 5, wherein the vaccine The is inoculated at least once in multiple vaccine inoculation.
 - method of claim 6, wherein the is inoculated at least once in multiple vaccine inoculation.
- The method of claim 7, wherein the method comprises the 20 steps of (a) inoculating a DNA vaccine and then (b) inoculating Sendai virus vector encoding a virus protein of immunodeficiency virus.
 - 10. The method of claim 8, wherein the method comprises the steps of (a) inoculating a DNA vaccine and then (b) inoculating Sendai virus vector encoding a virus protein immunodeficiency virus.
 - 11. A method for inducing cellular immune response specific to a virus protein of an immunodeficiency virus, the method comprising the steps of (a) introducing a Sendai virus vector encoding a virus protein of an immunodeficiency virus into an presenting cell and (b) contacting the presenting cell with a T helper cell and a cytotoxic T cell.
